

The Importance of Considering Mineralocorticoid Receptor (MR) Overactivation in Patients With Chronic Kidney Disease (CKD) Associated With Type 2 Diabetes (T2D)

In adults with
CKD associated with T2D,
there are **3 main factors**
that may contribute to
CKD progression¹⁻³

HEMODYNAMIC^{1,2}
Elevated BP

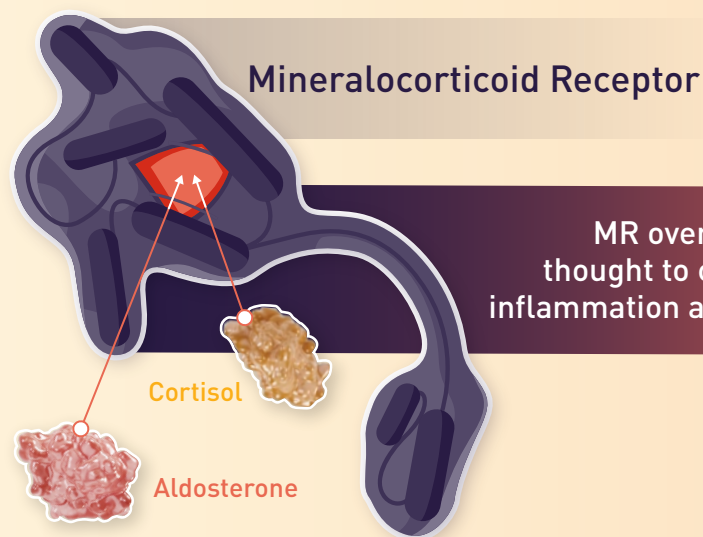

**INFLAMMATION AND
FIBROSIS IN THE KIDNEYS**¹⁻⁴

Inflammation and fibrosis can
contribute to permanent
structural damage in the kidneys

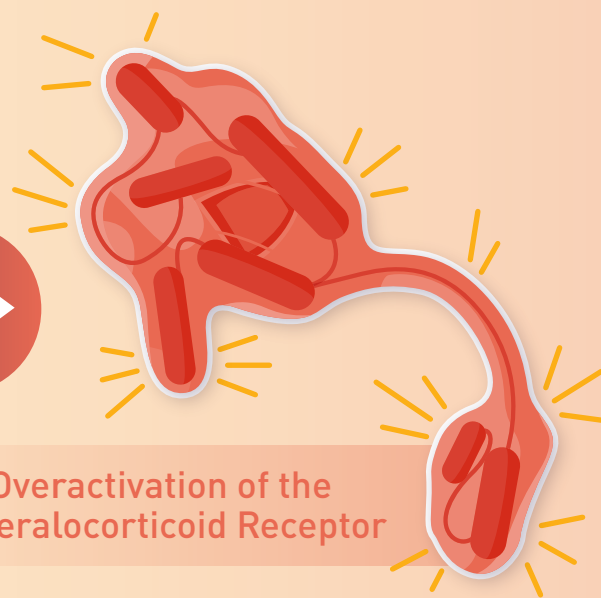

METABOLIC^{1,2}
Elevated HbA1c

BP, blood pressure; HbA1c, glycated hemoglobin.

MR overactivation is
thought to contribute to
inflammation and fibrosis^{1,5}

Overactivation of the
Mineralocorticoid Receptor

Consider each of the **3 main factors** associated
with CKD progression in patients with T2D
for appropriate disease management^{1-3,6}

Encourage your patients to
learn more about CKD
associated with T2D by visiting
